Abstract (en)

[origin: WO2013013995A1] The present invention relates to a cooling device (1) and to the production and use thereof, the device comprising a stack (2) of at least two plates (3, 4) each of which has recesses (5). The at least two plates (3, 4) are stacked on top of one another in such a manner that cooling channels passing through the recesses (5) are formed for a cooling fluid. The at least two plates (3, 4) comprising recesses (5) are rolled expanded metal meshes (3, 4).
