Abstract (en)
[origin: EP2721961A1] The component (10) has a stress-stable membrane (14) clamped in or secured at a frame (11) and formed at a fastening interface e.g. piping lath, in a region of the frame in a tension-resistant manner. The stress-stable membrane is formed in an intended stress region of the component in a pressure-resistant manner. A cover (13) comprises a front visible side (17), which forms an utilizable surface of the component and a rear visible side, which form a back (18) of the component. The rear visible side completely covers the stress-stable membrane together with the frame. An independent claim is also included for a seat furniture.
