Abstract (en)
[origin: EP2721970A2] The present invention relates to a roman blind fabric on which loops are formed and a roman blind using the same. More particularly, rings for inserting loop cords thereinto are integrally woven on the back surface of a loop-forming fabric at the time when the loop-forming fabric is woven, and the loop-forming fabric and a roll-up fabric are provided as a double layer to prevent the loop cord from being wrapped around the neck of a child. In order to achieve this, rings (32) for inserting loop cords (31) are woven integrally with a loop-forming fabric (30) in such a manner as to be formed transversely and longitudinally at the time when the loop-forming fabric (30) is woven; the upper end of the loop-forming fabric (30) is fixed to a frame (39); the upper ends of a roll-up fabric (36) which is placed on the back side of the loop-forming fabric (30) and a plurality of loop cords (31) are fixed to a winding rod 37; and the lower ends of the loop-forming fabric (30), the roll-up fabric (36) and the loop cords (31) are fixed to a weight (42).
