Abstract (en)

[origin: EP2721988A2] The head has a suction nozzle (2) for fixedly or pivotally connecting a suction unit with a housing (1). A dispensing device (3) dispenses a cleaning agent, and a slot-shaped suction opening (4) is formed at an underside of the housing for sucking the cleaning agent from a floor area. A suction chamber (5) is equipped with a rolling chamber (6), in which a propelled cleaning roller (7) is arranged. The suction opening extends along a floor-side aperture of the rolling chamber and is limited at a longitudinal side facing away from the aperture by a sealing lip (11) i.e. semi-rigid rubber lip.
