Abstract (en)
[origin: EP2722285A1] The plastic pallet has a deck for storage of transportable objects, and legs that project from underside of the deck. The runners are connected with two legs that are provided at the lower sides. A groove-shaped recess (7) is formed at the bottom of the runners and is extended in the longitudinal direction of the runner. A stiffening element (8) is formed in the recess, and consists of material that has high modulus of elasticity than material from which runners are formed. The stiffening element is fixed by fixing unit in the recess.
