Abstract (en)
[origin: EP2722458A1] The gutter has a longitudinal wall and another longitudinal wall (6) extended from a bottom wall (1) to which the walls are connected by bottom ends (14, 15) to define a gutter cavity (8). The bottom wall has an opening (3) comprising an upper section (4). One of the walls includes a projecting lip (10) in a direction opposed to the cavity at an end (9) opposed to the one of the bottom ends. The walls form flared longitudinal walls from the bottom wall and extend towards the section in a direction opposed to the cavity. The section is greater than a basal section (2) of the bottom wall. An independent claim is also included for a method for associating a first gutter with a second gutter for roof.
