Abstract (en)

[origin: EP2722460A1] A pergola-type canopy (10), of the type comprising a frame (11) of two parallel longitudinal members (12, 13), on each of which an end (14, 15) of a transverse end member (16) slides, the edge (17) of a covering awning (18) being fixed to the member, the awning (18) being adapted to be extended and gathered, with corresponding movement means (19), thanks to the guided translation of the transverse end member (16), first ends (21, 22) of the longitudinal members (12, 13) being fixed to the wall or supported by corresponding stanchions, the second ends (23, 24) of the longitudinal members (12, 13) being supported by corresponding stanchions (25, 26). The means for the movement of the awning (18) are constituted by a motorized winding shaft (20) for the awning (18), the transverse end member (16) pulling the awning (18) by way of means (27) for the continuous tensioning of the awning, automatic electrically-actuated engagement means (28) being provided for the transverse end member (16) in the stroke limit configuration with the awning extended.
