Abstract (en)  
[origin: EP2722472A2] The fittings (1) have a frame attached to a first fitting device (4) with a support element. An axle unit is rotatably arranged in the support element about a rotation axis. The axle unit is rotatably connected with a second fitting device (5). The support element comprises first and second support outer surfaces that are defined parallel to a door (2). The second fitting device comprises a fitting outer surface that is defined parallel to the door leaf. The first support outer surface is flushed with the fitting outer surface in a closed state of the door leaf.
