Abstract (en)

[origin: EP2722611A2] The invention relates to a central heating device comprising a central heating boiler comprising connection provisions for connection of the boiler to external conduits such as a fuel supply line and conduits for supply of one or more media to be heated and transport of the one or more media heated by the boiler to a user. The central heating device comprises for each of the connection provisions of the boiler connection means for forming a fluid connection between the boiler and the external conduit concerned, wherein each of the connection means comprises a length of flexible conduit as well as a quick release coupling that is arranged for repeatedly coupling and decoupling. The invention also relates to method for performing maintenance to a central heating device according to the invention in which the boiler is replaced.
