Abstract (en)

[origin: EP2722862A1] An electric assembly suitable to be installed in a switchgear, comprising: - a switching device having a casing and at least one electric phase comprising a couple of contacts which can be actuated by an associated kinematic chain, wherein an electric terminal is operatively associated to said at least one electric phase and connected to the kinematic chain; - blocking means which are adapted to be operatively connected to the casing and/or to the switchgear, and which are adapted to operatively interact with the kinematic chain so as to interrupt a displacement of the electric terminal along at least one direction.
