Abstract (en)  
[origin: WO2012175726A1] The storage device (10) comprises a body (41) provided with a plurality of housings and holding cavities (20, 22, 24) and a central cutout (42) provided with an internal wall designed to receive the pole (34). The device (10) is held on the pole (34) by the pressure force exerted by a gripping member (49) that is connected to the body (41) and is adjustable with respect to the pole (12) and by the reaction force of a part of said wall of the cutout (42) acting on the pole (12). The gripping means (49) comprises a fixing flange (50), separate from the body (41), inserted into the cutout (42) and connected in an adjustable manner to said wall of the cutout (42). Application to a gravity emptying appliance.
