Abstract (en)

[origin: WO2013020837A1] The invention relates to, among other things, a device for controlling a rail vehicle (10). According to the invention, the device is characterized by an image acquisition device (20, 20') for recording an image or an image sequence and an image recognition device (30) connected to the image acquisition device (20, 20'), the image recognition device being suitable for recognizing a control command sign or a control command motion in the image recorded by the image acquisition device or in the image sequence recorded by the image acquisition device and for producing a control signal (ST, ST') corresponding to the control command sign or the control command motion in order to control the rail vehicle (10).
