Abstract (en)
[origin: WO2012175904A1] The present invention relates to a vehicle storage device. A trolley (1) is provided having folding legs (2A, 2B, 3A, 3B) with wheels (2C, 2D, 3C, 3D) which move from a first in use position with the legs supporting the trolley for wheeled movement along the ground, to a second storage position with the legs folded adjacent the trolley, said trolley providing storage for goods. A housing (10) is provided for mounting in a vehicle to accommodate the trolley with legs in the second position. In use the goods can be placed in the trolley in one location and the trolley can be used to transport the goods with its legs in the first position to the vehicle where the trolley legs can be placed in a second storage position and the trolley placed in the housing in the vehicle whilst still supporting said goods, and the trolley can then be removed from the vehicle with its legs placed in the first position to transport goods to a second location.
