Abstract (en)

[origin: WO2013171692A1] An apparatus (1) for packing a tile or a stack of tiles (2) by means of a pair of cardboard blanks, comprising: first folding means (36) for applying a first cardboard blank (9) to a tile or stack of tiles (2), realising a first semi-pack (91); a rotary platform (26) arranged downstream of the first folding means (36); a first structure (40) mounted on the rotary platform (26) and which comprises a first seating (51) for receiving a semi-packed tile or stack of tiles (2), which first structure (40) can rotate between a first angular position (A), in which it is possible to transfer the semi-packed tile or stack of tiles (2) coming from the first folding means (36) into the first seating (51), and a second angular position in which the semi-packed tile or stack of tiles (2) can be expelled from the first seating (51); first pushing means (63, 64) acting along the first structure (40) such as to expell the semi-packed tile or stack of tiles (2) from the first seating (51) when the first structure (40) is in the second angular position; second folding means (37) arranged downstream of the first structure (40) such as to apply a second cardboard blank (10) to the semi- packed tile or stack of tiles (2), thus realising a second semi-pack (92) which together with the first semi-pack (91) forms a pack.
