Abstract (en)
[origin: WO2013001217A1] The sachet (1) for a metered quantity of a fluid product comprises a first part (4a) and a second part (4b) in the form of sealed flexible layers having an annular attachment sector (8), a gripping region (13), and a sealed cavity (14), and, in a part of the gripping region (13), the layer portion of the first part (4a) and/or the second part (4b) is folded on itself from the edge (3) in a folded flap (18a, 8b), so as to form a thicker region (18) having a thickness at least twice the thickness of the layer portion of this part (4a, 4b), which makes up for at least part, or equalizes, or exceeds the overthickness in the region of the cavity (14), on account of the presence of the metered quantity of fluid product (P) located therein, so as to reduce or eliminate the risk of damage to the sachet (1) filled with the metered quantity of fluid product (P) when it is inserted into a magazine.
