Abstract (en)  
[origin: WO2013001223A1] The invention relates to a heat regenerator, which includes at least one matrix made of a refractory material in order to ensure the storage and recovery of heat. Said matrix includes at least one through-channel (2) capable of enabling the circulation of a fluid, said channel comprising at least two projections (3) projecting into the space defined by said channel, said projections being positioned on two opposite surfaces of the channel.
