Abstract (en)
[origin: WO2012174579A1] The invention relates to a method for carrying out cashless payments by means of mobile telecommunications terminals (5), wherein each telecommunications terminal has a subscriber identifier and a payment limit assigned to said subscriber identifier. In said method, a transaction code specific to the payment transaction is generated using an algorithm and is transmitted to the mobile telecommunications terminal (5). The telecommunications terminal (5) transmits the subscriber identifier, the transaction code and the payment limit to a cash register system (1) of a cashless payment transaction, where the transmitted payment limit is compared to the desired payment amount and the validity of the transaction code is checked using a verification algorithm stored in the cash register system (1). If the check is positive, the payment is authorized in the cash register system (1).
