Abstract (en)
[origin: WO2012175542A1] The invention relates to a method for creating a document reference data set (109) for a document, wherein the document has a first set of features and a second set of features, wherein the first set of features can be detected using a first detection method, wherein the second set of features can be detected using a second detection method. The method comprises the following features: detecting (101) the first set of features using the first detection method in order to obtain a first feature reference set (102), detecting (103) the second set of features using the second detection method in order to obtain a second feature reference set (104), linking (105) the first feature reference set (102) to page information that refers to a property of the first detection method in order to obtain a first feature reference data set (106) of the document reference data set (109), and linking (113) the second feature reference set (104) to further page information that refers to a property of the second detection method in order to obtain a second feature reference data set (108) of the document reference data set (109).
