Abstract (en)
[origin: WO2012175286A1] The invention relates to a press-in pin (1, 2) for an electrical press-in connection between an electronic component (3) and a substrate plate (4) with an electrical contact hole (5). The press-in pin (1, 2) has a press-in pin head (6) which has a press-in head length (lK) which is matched to a thickness (d) of the substrate plate (4). A press-in pin leg (7) extends between the electronic component (3) and the press-in pin head (6). A press-in pin collar (13) forms a transition between the press-in pin leg (7) and the press-in pin head (6) and has a locking projection (14). The press-in pin head (6) is coated with a layer (20) of a lead-free tin alloy (15). At least the press-in pin collar (13) with the locking projection (14) has an electrically insulating coating (16).
