Abstract (en)

[origin: EP2724764A1] The game device (12) has electric rail model game article (20) with visual display device (52) which displays the images and image sequences stored in memory unit, in response to control signal provided to control input. The physical portion of game article during game situation is represented in each image and image sequence. The images of physical portions of game articles corresponding to different game situations are read from memory unit and displayed in response to various control signals. An independent claim is included for a method for operating game device.
