Abstract (en)
[origin: EP2724950A1] The unit has a motor (2) i.e. servomotor, for driving a glue roller (1) and positioned above the glue roller. The motor is arranged corresponding to a support structure (3) of the motor in height-adjustable manner, where height of the motor is adjusted using a toggle lever e.g. elbow lever. The motor is brought from operational position in first height position to removal position in second height position, where the glue roller is removed from the gluing unit in the removal position by lateral motion.
