Abstract (en)

[origin: EP2724960A1] The facility has a module (1) comprising a set of channels (2) that are superimposed and juxtaposed to receive medicine boxes, and a sorting circuit arranged partially above and below the module of channels for sorting the boxes so as to store the boxes in the channels. A gripping device is configured to introduce and/or withdraw the boxes from the channels. A delivery device delivers the boxes outside the channels. The sorting circuit includes a conveying device (3) i.e. conveyor belt, to receive the boxes before the sorting of the boxes and to form a buffer zone.
