Abstract (en)

An insulated hood of a paper machine, in which hood at least a wall, a door element or a roof has been constructed by arranging at least a first element (10) and a second element (11) in contact with each other. The elements comprise two essentially parallel planar surfaces (12a, 12b), an insulation material (13) between the surfaces, and watertight edges. The gap between the first and the second surface (12a, 12b) comprising the insulation material (13) is free of frame structures of the hood.
