Abstract (en)  
[origin: EP2725237A1] The membrane (20) is arranged within a container and has a working area (22) which is designed for a displacement in the container. A pressure ratio is applied to the membrane in the container. The working area is partially formed from a material (40) which behaves rigidly at the application of the pressure ratio. The working area has an elastic region (44) which behaves elastically at the application of the pressure ratio. The working area is displaced within the container, particularly by the pressure ratio.
