Abstract (en)

[origin: EP2540335A1] The container has a tank (4) for containing fluid that is intended to be entrained by gas flow. A sealing element (2) is arranged between the tank and a lid (1). The sealing element comprises a peripheral gasket (22) and an internal strut (21) for ensuring a respective positioning of an inlet nozzle (31) for the gas flow and an outlet nozzle (32) for the gas flow charged with the fluid. The lid includes an input orifice (11) to be connected to an opening of a gas exhaust apparatus and an output orifice (12) connected to a pipe to deliver gas flow charged with the fluid to a patient.
