Abstract (en)

[origin: WO2013023911A1] The invention relates to a method for reprocessing waste water (2) from an industrial process, comprising an organic acid. Said method comprises the following steps: the waste water is introduced into a heat exchange process in which a heat exchange medium (4) is used so that the waste water (2) which is to be treated is heated to a temperature between 60 ° C and the boiling point of the waste water (2). Subsequently, the waste water is partially evaporated and re-condensed, said waste water (2) being radiated with UV radiation (6) during the evaporation and condensation process in the liquid and/or gas phase. As a result, a chemical transformation of the organic acid in H₂O and carbon dioxide is at least partially carried out. Then, the condensed part of the purified waste water (24) is fed back into the industrial process.
