Abstract (en)  
[origin: WO2013001420A1] The invention starts from a method for producing a composite material (25) which comprises at least one matrix material (23) and at least one fibre material (21), said composite material being suitable more particularly for use as a hob plate (30). For the purposes of saving on machinery and energy, the proposal is that in at least one step (20, 22) of the method, the matrix material (23) be produced by gel formation from a suspension (17).
