Abstract (en)
[origin: WO2013001035A2] The invention relates to a fuel distribution block for an internal combustion engine that has a belt arrangement, said belt arrangement comprising a belt that is functionally connected to a belt pulley which is coupled to a shaft, in order to drive a unit, especially an engine unit, via a further belt pulley which is functionally connected to the belt. A belt deflecting device is arranged on the fuel distribution block to deflect the belt in order to minimize the physical size of the belt arrangement.
