Abstract (en)

[origin: WO2013001031A2] The invention relates to a method and a device for displaying an object, in particular a biological tissue, said method having the following steps: a) generating a first image (7) of at least one sub-region of the object (4) using a first device (2); b) generating a second image (8, 8') of at least one sub-region of the object (4) using a second device (3); c) ascertaining first coordinates of at least some image points of the second image in a first coordinate system; d) ascertaining second coordinates of the image points of the second image by projecting the first coordinates into a second coordinate system which is different from the first coordinate system and which is assigned to the first device (2); and e) generating a combined image of the object (4) from the first and the second image using the ascertained second coordinates of the image points of the second image.
