Abstract (en)
A supporting device for maintaining the structural configuration and display of shoe (10), that comprises a shaping element (101) positioned in interior of shoe (10), made from a material that allows flexibility for adjusting to the internal shape of the mold of shoe (10) obtaining sufficient rigidity to avoid its deformation, and a suspension element (102) that is attached to shaping element (101) to enable suspending shoe (10) for display on another surface for its sale, without said shoe (10) becoming deformed.
