Abstract (en)

[origin: EP2727685A2] The device has a cage (5) comprising a retaining space (6) between two upper- and lower front ends for retaining a screw head of a screw (4). A partial ring projection (8) projecting into the retaining space is arranged at one of the front ends for installing at a drive side of a plug nut (1). Another partial ring projection (9) is arranged at the other front end for installing at a lower side of the head. An axial inner spacing of the projections at the front ends corresponds to spacing between the lower side of the screw head and the drive side of the plug nut that is engaged with the head. The cage is formed as a partial hollow cylinder (7).
