Abstract (en)  
[origin: EP2727856A2] The insulating cup (12,14) has a liquid-tight inner cup (16) and an outer sleeve (18) enveloping the inner cup in sections. The outer sleeve comprises a blank made of a paper material and a two-dimensional insulating material applied on the paper material. The two-dimensional insulating material is applied only on a partial area of the blank, where an overlapping area (20) of the blank, in which the outer sleeve has a material thickness twice the thickness of the paper material, is not provided with the insulating material. An independent claim is included for a method for manufacturing an insulating cup.
