Abstract (en)

The mechanism (1) has a gear train (2) provided for constant frequency gear driving on an output of a timepiece movement. A three-dimensional display unit (3) displays day and phase of a celestial body that is represented by a mobile component (5) i.e. sphere, which is driven by the gear train. The gear train includes a phase wheel (10) and a day wheel (20) meshed on the output of the timepiece movement. The phase wheel or the day wheel includes an uncoupling unit located between an input and an output, where uncoupling unit of the day wheel includes a jumper spring (25). An independent claim is also included for a timepiece movement.

Abstract (fr)

Mécanisme d'affichage (1) du jour et de la phase d'au moins un premier astre, comportant un rouage (2) pour une prise d'entraînement de fréquence constante sur un mouvement (100) d'horlogerie. Ledit mécanisme (1) comporte des moyens d'affichage tridimensionnel (3) du jour et de la phase dudit premier astre représenté par un premier mobile (5), qui sont entraînés par ledit rouage (2).
