Abstract (en)
An aerial is described which is configured to receive and/or transmit radio frequency signals; the aerial comprises a reflector (3), at least one radiator element (4), a plurality of director elements (5) and a rod element (2) for supporting said reflector, of said radiator element and of said plurality of director elements. The aerial comprises at least one passive dipole (10, 11) mounted on the rod element and arranged between the reflector and the radiator element.
