Abstract (en)
[origin: WO2013007373A1] The invention relates to a hookah tobacco substitute. Hookahs allow the user to consume aerosols and flavors present in a fluid. Known hookahs are disadvantageous in that intense heat causes the fluid to decompose or combust. In addition, the hookah ceases to release sufficient aerosols and flavors. The aim of the invention is therefore to allow even and complete release of the aerosols and flavors. This aim is achieved by using a hookah tobacco substitute which contains at least one closed-pore carrier for the fluid.
