Abstract (en)
[origin: WO2013000443A1] The invention relates to a folded seam connection (1) that is formed by joining an inner sheet-metal part (2) and an outer sheet-metal part (3). Said connection is formed at the edge (5) of the inner sheet-metal part by the folded edge (6) of the outer sheet-metal part (3). The invention is characterized in that the inner sheet-metal part (2) has at least one stop elevation (4) which is formed in the region of the folding line (h) of the folded seam connection (1). Said elevation (4) is formed on the upper surface (7) of the inner sheet-metal part (2), has an elongated shape, and is intersected by the folding line (h) of the folded seam connection (1).
