Abstract (en)

[origin: WO2013004389A1] The invention relates to a method and a device for carrying out the method of the programming and configuration of a programmable logic controller (D) by means of a configuration tool (K) present in a programming tool (B). In addition to a module (80) in an IEC61131 language at least one further module (C) is integrated into the configuration tool (K), said further module programming the programmable logic controller (D) by means of a C code editor (3A) in a standard language, module (C) providing a definition of interfaces between an IEC61131 code and a standard code and the configuration of the standard code.
