Abstract (en)

[origin: WO2013004738A1] The aim of the invention is to provide a solution by means of which the overall size of an electrical connection terminal (16) can be significantly reduced in a clamping unit (1) of an electrical connection terminal (16). This is achieved in that the clamping unit (1) has a busbar (2), a clamping spring (3) for clamping a conductor to the busbar (2), and a pin contact-making element (4) for making contact with a pin contact (5), wherein the pin contact-making element (4) has a spring arm (7) which is arranged substantially parallel to the busbar (2) and which is connected to the busbar (2) by means of a connecting piece (8).
