Abstract (en)

[origin: EP2730264A2] The transport carriage (100) comprises a delimiting unit (158, 160) for delimiting the swiveling movement of the castors (110-116) about the swiveling axis. The delimiting unit is comprised of an upper engaging element in which contact of the upper engaging element with the operating table column is arranged in the fork-shaped opening (150) and at a distance from the plane on which the castors are supported. The position of the lower engaging element (166) is changed from the delimiting position back to the release position. An independent claim is included for an arrangement having an operating table.
