Abstract (en)

[origin: EP2730516A1] The device (100) has two posts (104) for retaining a stack (200) of patterns (201) from bottom to a top panel. Each post is provided in the form of a band of a material that is drawn up from the bottom to the top panel for joining the post. Each post is connected to the bottom and the top panel by a folding line (110b) and bordered beyond a side that is formed by another folding line (116) by a side extension (117), which is folded toward an outer side of the device and extended from the bottom to the top panel. The device has a blank (101) whose sheet material formed as a paperboard or corrugated cardboard from a semi-rigid plastic. Independent claims are also included for the following: (1) a case-pallet (2) a blank (3) a method for feeding a sheet feeder in patterns.
