Abstract (en)

[origin: EP2730537A2] The spigot head (1) has a spigot head body (2), in which a span gas supply line (7) and a beverage discharge line (8) are formed. A movable plunger (5) and a swivel handle (3) are arranged in the spigot head body. The handle is kinematically coupled with the plunger. The spigot head body is material-uniform and is integrally formed of a fiber-reinforced plastic, particularly polyamide. The swivel handle is transferred from an initial position into a locking position.
