Abstract (en)
[origin: WO2013008068A1] The vial (1) for the dispensing of fluid products, particularly for medical, pharmaceutical, cosmetic products or the like, comprises: a hollow body (2) for containing a fluid product, having a neck (4) from which protrudes a pin (5) which can be removed by tearing it off, the tearing off of the pin (5) being suitable for defining a dispensing mouth (6) of the fluid product, a cap (8) which can be fitted on the neck (4) and having a through hole (9) which can be crossed from side to side by the pin (5) in a fitting configuration wherein the pin (5) appears on the outer surface; anti-rotation means (16, 17) placed between the pin (5) and the through hole (9) and suitable for preventing their rotation, the placing in rotation of the cap (8) with respect to the hollow body (2) being suitable for dragging in rotation the pin (5) to remove it by tearing it off; at least a longitudinal interlocking system (19) which is suitable for preventing the longitudinal removal of the pin (5) from the through hole (9) and which comprises a pad which is obtained at the free extremity of the pin (5) and having: a guiding profile (21) which is suitable for crossing the through hole (9) and appearing on the outer surface of the cap (8), and a supporting surface (22) suitable for resting onto an outer edge (23) of the through hole (9).
