Abstract (en)

[origin: WO2013007367A1] The invention relates to the use of one or more secondary paraffin sulfonates having 8 to 22 carbon atoms for increasing the cleaning capacity of enzymes. Protease, amylase, mannanase, lipase and endolase are preferably used as enzymes. The increase of cleaning power of the enzymes occurs particularly in liquid detergents for textiles and on stains of milk, starch, blood, chocolate and/or cocoa.
