Abstract (en)
[origin: WO2013007608A2] The invention relates to a refrigeration appliance (1), in particular domestic appliance, having a first chamber (3) to be cooled and a second chamber (5) to be cooled, a coolant circuit for cooling the chambers (3, 5), which has a compressor (7) for compressing coolant vapour, a condenser (9) for condensing the coolant vapour, which is arranged downstream of the compressor (7), and an evaporator (11) for evaporating the condensed coolant, which is arranged downstream of the condenser (9) and upstream of the compressor (7), wherein a first sensor (17) is provided for detecting a first temperature in the first chamber (3) and a second sensor (19) is provided for detecting a second temperature in the second chamber (5), wherein a valve (21) is arranged between the condenser (9) and the evaporator (11), which valve conducts the coolant flowing out of the condenser (9) via a first coolant duct (31) or a second coolant duct (33) to the evaporator (11) depending on the first temperature and/or on the second temperature.
