Abstract (en)

[origin: WO2013007577A1] The present invention relates to a field glass (10) with an axially movable optical assembly (14), more particularly a focusing mechanism and an adjusting mechanism (16) for actuating the optical assembly (14). A force-transmission section (18) from the adjusting mechanism (16) to the optical assembly (14) is at least partially formed by a plurality of force-transmission elements (26, 28) arranged adjacent to one another in a force-transmission channel (24).
