Abstract (en)

[origin: WO2013006981A1] An operating apparatus has a housing (2) which is formed such that the top side of a frame (3) is adhesively bonded to a safety glass (5) which has, in the interior of the frame, a sensor means (6) which can be used to detect when the safety glass is touched. The housing is provided, on the underside thereof, with a cover (8) which is releasably fastened to the frame (3). The cover has a monitor (9) which, together with the safety glass and the sensor means, forms a touch-sensitive screen. Such an operating apparatus may be waterproof and dustproof and is easy to clean, which makes said apparatus particularly suitable for machines processing foodstuffs.
