Abstract (en)

[origin: WO2013010899A1] The invention relates to a communication cartridge (1) characterized in that - it is adapted to be integrated in a removable manner into a recess (25) of a host equipment (2), during normal operation, an external front part (13) of the cartridge being intended to be external to the recess (25) of the host equipment (2), and in that - it comprises at least one front port, placed in an internal space of the cartridge (1) and intended to cooperate with a wireless communication module also placed in the internal space of the cartridge (1), during normal operation, the front port being moreover adapted to have an adjustable position in the internal space, so that the module is at least partially positioned in the external front part (13) of the cartridge (1), during normal operation. The invention also relates to an equipment, an assembly and a system corresponding thereto.
