Abstract (en)

The present invention relates to an oil collecting vessel (100), which comprises a first and a second side hull (101, 102), a central hull (103) between the side hulls (101, 102), and an oil collecting means (119, 120) arranged in connection with the central hull (103) for collecting oil from water. The oil collecting vessel (100) further comprises a first and a second guiding arm (108, 109) for guiding oil towards the central hull (103), the first guiding arm (108) being arranged between the central hull (103) and the first side hull (101), and the second guiding arm (109) being arranged between the central hull (103) and the second side hull (102). The invention also relates to an oil collecting arrangement (200) and method.
