Abstract (en)
[origin: EP2733268A2] The machine has a loading system, which has a vertically adjustable load beam with a load receptacle (6) for receiving the load to be moved. An evaluation unit is provided for detecting a panic situation of an operating person operating a control unit. An emergency control mode involving the actuation of the loading system is provided upon detection of a panic situation of the operating person. An operating mode of a control element for the loading system is detected by sensors.
