Abstract (en)  
[origin: EP2733293A1] The system has a base frame (2) comprising a circulating flange (3) that is fixed around a building opening. An inner adjusting frame (4) is movable in a depth direction opposite to the base frame and connected with a window or a door (5). The base frame and/or the adjusting frame is made from fiber-reinforced plastic. An outer adjusting frame is connected to an outer side of the window or the door, where the flange comprises a circulating vapor-tight seal (8). The outer adjusting frame has a rendering terminal block at an outer edge.
